

THE AIRBORNE THREAT IS REAL

Protect your staff and customers with the AeraMax Pro

THE AIRBORNE THREAT IS REAL.

Protect your staff and customers with the AeraMax Pro

The threat of airborne viruses is very real. They spread in the air when we speak, laugh, cough, and sneeze. Now, more than ever, protective efforts must include safeguarding the air we breathe. Indoor air is 2-5 times dirtier than outdoor air, and by using the right air purifier, the spread of viruses and germs in the air is minimised, can also reduce air pollutants such as Bacteria, Allergens & Asthma triggers, Odours and Pollution, and will keep your staff and residents safe. The AeraMax Pro with H13 HEPA filters has a four stage filtration process that captures large particles, absorbs odours and volatile compounds, and captures up to 99.95% of particles as small as 0.1 microns.

Patented EnviroSmart™ Technology uses dual self-regulating laser sensors to measure sound, motion and air quality. AeraMax Pro works hard when it needs to, and shifts to standby when possible, saving energy and extending filter lifespan.

Seeing is believing - the best way to show your facility occupants that you are taking their health seriously is to show them! The invisible becomes visible with PureView™ technology, a display that allows occupants to see the difference as they feel the difference.

The AeraMax Pro comes in a range of sizes to suit your needs.
